

WHAT IS CLAIMED IS:

1. A mobile telephone set comprising:  
display means for displaying information including  
telephone numbers or characters comprising;  
5 a first address data bus connected to principal  
integrated circuits such as control means and storage means; and  
a second address data bus for connecting said control  
means and said display means independently of said first address  
data;  
10 wherein said control means controls said first address  
data bus and said second address data bus independently.
2. A mobile telephone as claimed in claim 1, further  
comprising communication means for transmitting signals via a  
radio line  
15 wherein said control means is controlled to prohibit  
access to said second address data bus while said communication  
means is receiving signals.
3. A mobile telephone as claimed in claim 1, wherein  
said second address data bus is driven by lower voltage than said  
20 first address data bus.
4. A mobile telephone as claimed in claim 1, wherein  
in the case of accesses other than access to said display means,  
the second address data bus is inhibited to actuated.
